

Instructions

Lighthouse

To make your own lighthouse you'll need:

- 1 large cup (included)
- 1 small cup (included)
- 1 tea light (included)
- Black construction paper (included)
- Glue

Lighthouses were lifesaving for sailors on the treacherous waters of the North Carolina coast, where the Cape Fear River ends. To make your own, decorate the outside of the large cup with the black construction paper. You can model your lighthouse after one of the real North Carolina lighthouses or make up a fun new pattern. Next, turn your cup upside down and place it on the table. Put your tea light on top, then put the clear cup over your tealight. Now you're ready to help ships find the shore!

Train Signals

You'll need:

- 1 railroad whistle
- 1 railroad signal sheet

Using your whistle and your railroad signal sheet, try some of the cues that engineers would have used traveling up and down railroad lines in North Carolina!
